Crossflo DataExchange® Combines with HP Integrity NonStop Servers to Create Innovative Healthcare Interoperability Solution

SAN DIEGO--(BUSINESS WIRE)--Crossflo Systems, Inc.®, an innovative provider of data sharing solutions for the public sector, today announced that its Crossflo DataExchange® Software (CDX) will be available with the HP Integrity NonStop platform in a new healthcare interoperability solution.

The CDX solution rapidly connects data stores across disparate hospitals, labs, pharmacies, and government agencies while allowing healthcare providers to secure and retain control of their data. CDX can also be used to enable data sharing among hospital groups with different legacy healthcare solutions. The solution can even be leveraged as a data acquisition tool for moving information to a data warehouse, where CDX performs extraction, transformation, and loading of data that can be displayed in a web portal or exchanged with other operational data stores.

The HP Integrity NonStop platform provides secure, continuously available, real-time access to critical healthcare information.

“With the combination of the cost-effective, high-availability HP Integrity NonStop platform and CDX, healthcare providers can make connections that aid in the fight against bioterrorism, support disease trend analysis, and provide critical feedback to Health and Human Services agencies,” stated Renney Senn, Crossflo’s chief executive officer and president. “With this joint offering, we can help measure and improve healthcare quality initiatives across the public health community - at local, state, and federal levels.”

“Information sharing is the critical component of both public and private healthcare, but finding the right technology, based on the right standards, has been a barrier for most healthcare providers,” stated Harry Kim, director, Health & Life Sciences, HP. “By joining the HP Integrity NonStop platform with the standards-based Crossflo DataExchange solution, we are enabling healthcare providers to have quick access to their data in a secure, cost-effective manner.”

CDX, fully tested and certified for use with the HP Integrity NonStop platform, utilizes a standards-based approach and a service-oriented architecture (SOA) to provide a robust, system-agnostic solution that is extensible and scalable. To ensure maximum interoperability, CDX supports leading and emerging national data-sharing standards, including:

- National Information Exchange Model (NIEM)
- Health Level 7 (HL7)
- Emergency Data Exchange Language (EDXL) & Common Alerting Protocol (CAP)
- Global Justice XML Data Model (GJXDM)

About Crossflo

Crossflo Systems, Inc. provides data sharing solutions to the public sector. Crossflo’s flagship product,

the Crossflo DataExchange™ (CDX) solution, is commercial off-the-shelf (COTS) middleware specifically designed for interagency and cross-domain data sharing. Standards-based architecture and intuitive interface design enable end users to strengthen control of their information and rapidly connect disparate data sources across multiple platforms. Backed by operationally-oriented professional services, Crossflo solutions help agencies involved with Justice and Public Safety, Public Health, and National Defense and Domestic Security to achieve rapid, measurable results. More information is available at www.crossflo.com.
